SEA UN GANADOR....

Nan ta bisa cu bida ta un wega pero ta posibel cu bo por gana mayoría di tempo si bo sabi e ventanan. Por ehempel, tin 9 peligro mayor den cas cual ta reconocí como causa di mayoría accidentes. No necesariamente den orden di nan importancia nan ta: caída, instrumentonan skerpi, kemaduras of candela, equiponan eléctrico, veneno, sofocamento, electrocucion, gasnan venenoso y armanan di tira. Simplemente conociendo e lugarnan aki cu ta causa problema ta bon, pero esey ta solamente e cuminzamento. Bo trabao awor ta pa check den cas pa cualkier di e peligronan aki, y corregí nan--y no después tampoco, si no awor!

BE A WINNER....

They say life is a gamble, but chances are you can win most of the time if you know the odds. For example, there are 9 major hazards in the home known to cause most of the accidents. Not necessarily in the order of their importance they are: Falls, sharp instruments, burns or fires, power equipment, poisons, suffocations, electrocution, poison gases and firearms. Just knowing the troublemaking spots is helpful, but that is only the beginning. Your job now is to check through the house for any of these hazards, and correct them--not later, now!
